

ION ScaleBuster Limited 10-Year Warranty

Solid Performance. Solid Protection.

The ION ScaleBuster has been successfully deployed in more than 300,000 applications. A large number of those ScaleBuster units are still operating efficiently without maintenance or repair in both commercial and industrial situations after 20 years of use. Naturally, in aggressive and non-potable waters where ION ScaleBuster is used to prevent corrosion, a lower life expectancy could result. However the PTFE still remains active to prevent scaling.

When installed properly by an approved ION ScaleBuster distributor in potable water applications, there is a 10-Year Limited Warranty on materials on all ION ScaleBuster conditioners (or 1-Year warranty on filters). In other common applications, including but not limited to industrial fresh water, cooling systems, municipal applications, there is a 5-Year Limited Warranty on materials on all ION ScaleBuster conditioners. See details below.

To determine warranty coverage for your special applications (e.g. desalination, hot water and other non-common uses), please contact your ION ScaleBuster distributor.
